Authorities prevent innovation from growing out of hand

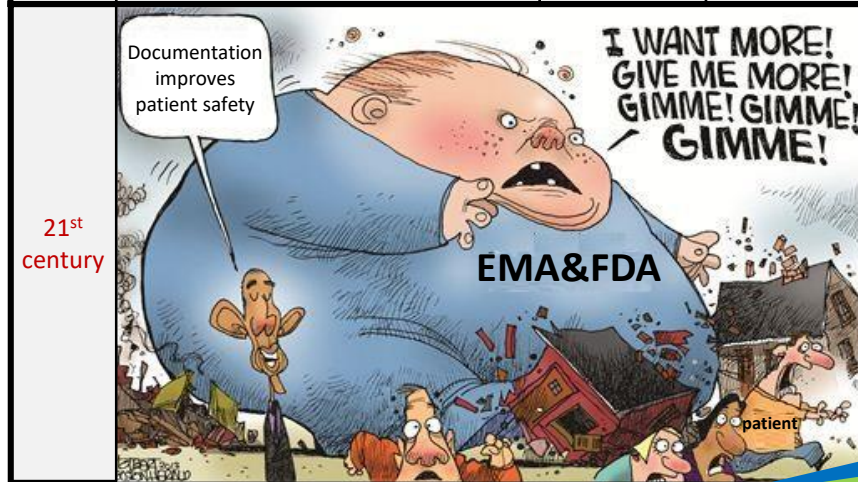

It is possible to challenge regulations

The regulations don't allow
half milk half water...but you're
OK with 51%-49%

Don't push back on documentation, it improves medicines!

Year	Product	Pages	Volume
1938	Adrenalin	27	1
1948	Benylin	73	1
1958	Poval	439	2
Softenon disaster			
1962	Norlestrin	12370	31
1968	Ketalar	72300	167
1973	Dantrium	200.000	456
1983	Voltaren	300.000	852

Life science must only use proven technologies

"This really is an innovative approach, but I'm afraid we can't consider it. It's never been done before."

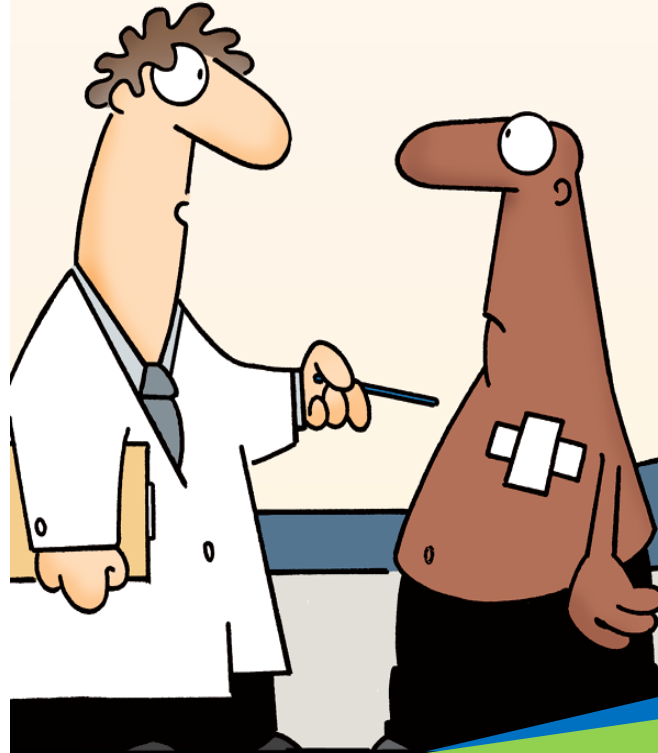

Medical device regulations make healthcare slow & expensive

"First we're going to run some tests to help pay off the machine."

The era of developing a one version medical products ends!

"It's a pacemaker for your heart,
plus you can download apps for your
liver, kidneys, lungs, and pancreas!"

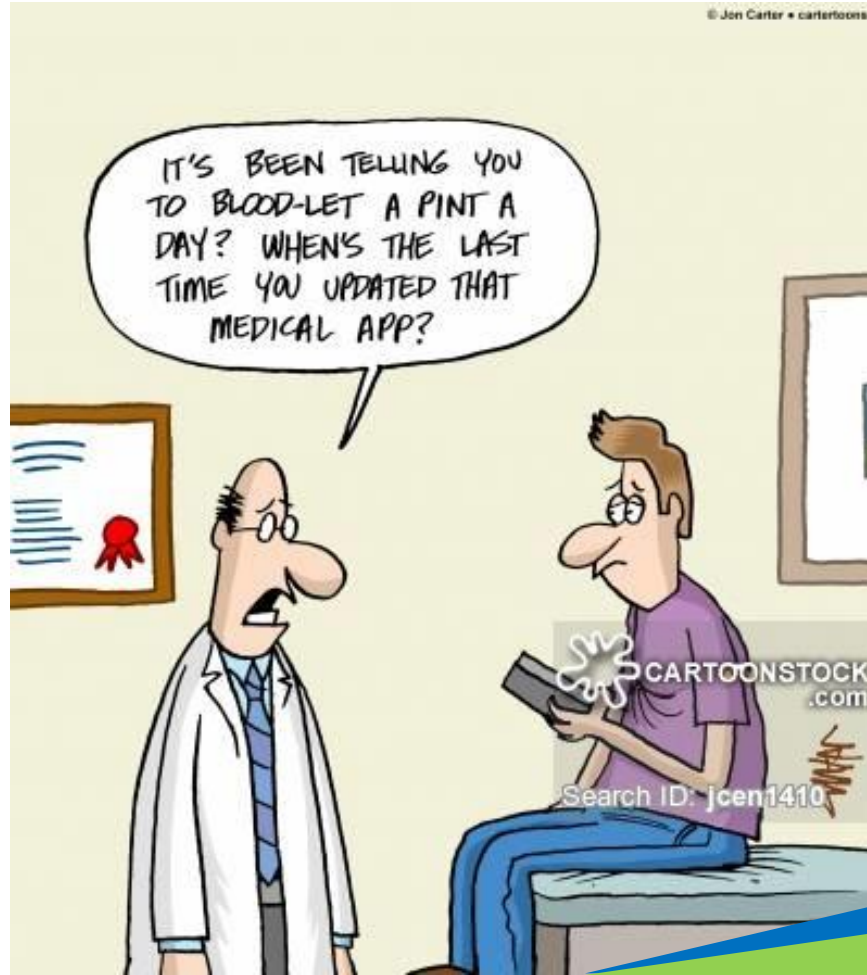

Medical software engineers really need oversight!

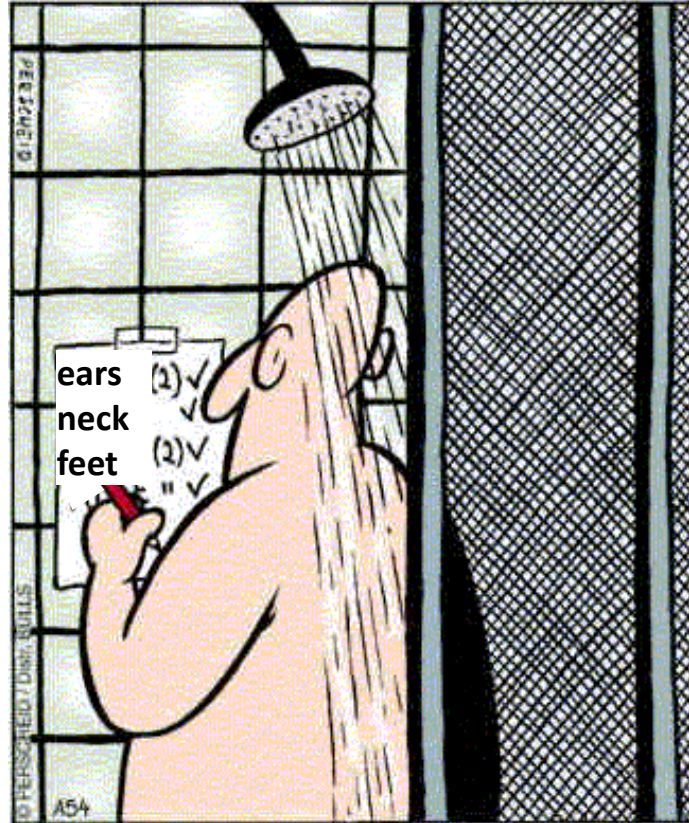

Validation is unnecessary overhead slowing down innovation

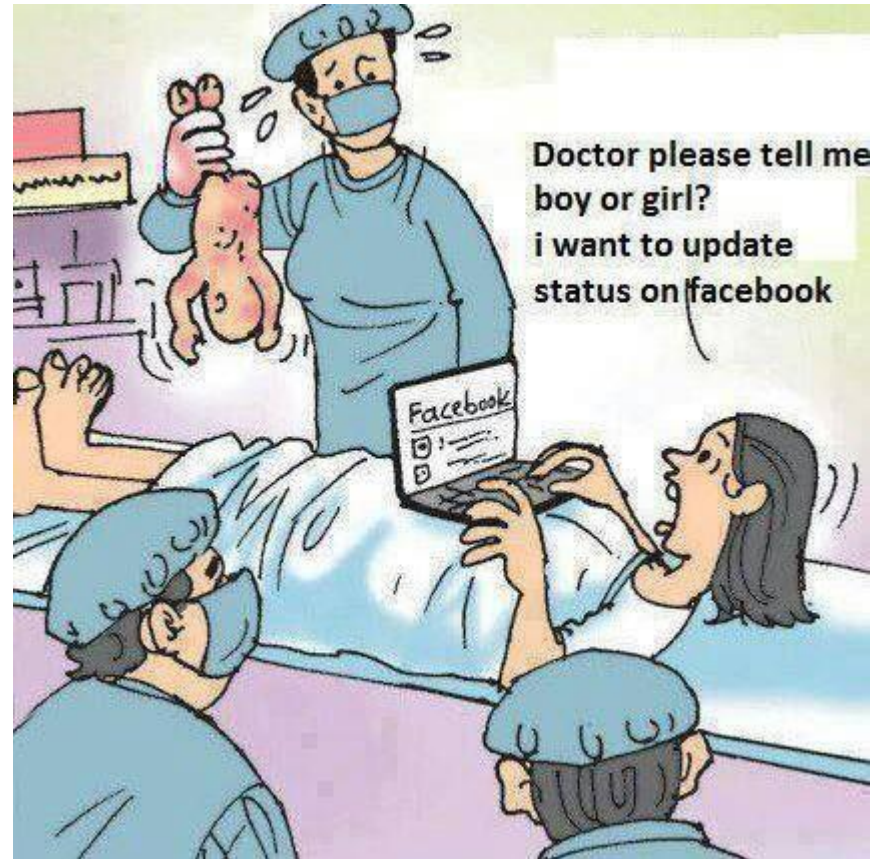

Better stick with an old version, validation effort is too high!

Rules are there to be followed, no thinking is needed!

Medical data security needs to be warranted!

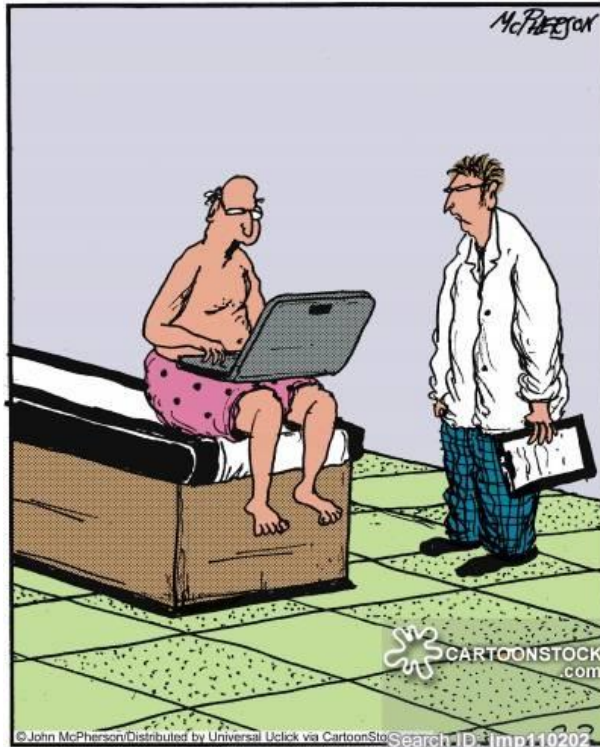

Software will vastly improve medicine

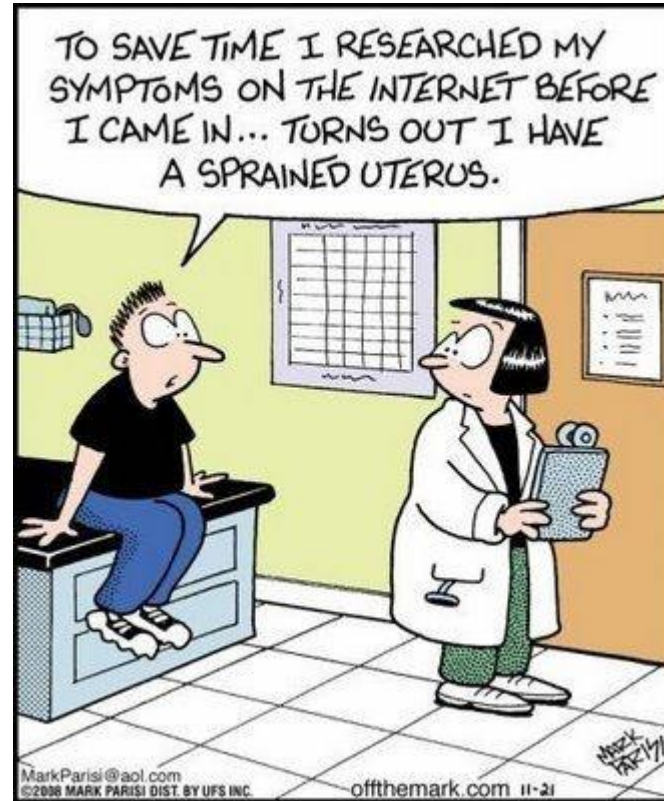

**"Your x-ray showed a broken rib,
but we fixed it with Photoshop."**

Computers are more accurate than doctors

“Okee-dokey... let's just see how your diagnosis and treatment plan compare to what WebMD.com has to say...”
